Abstract:

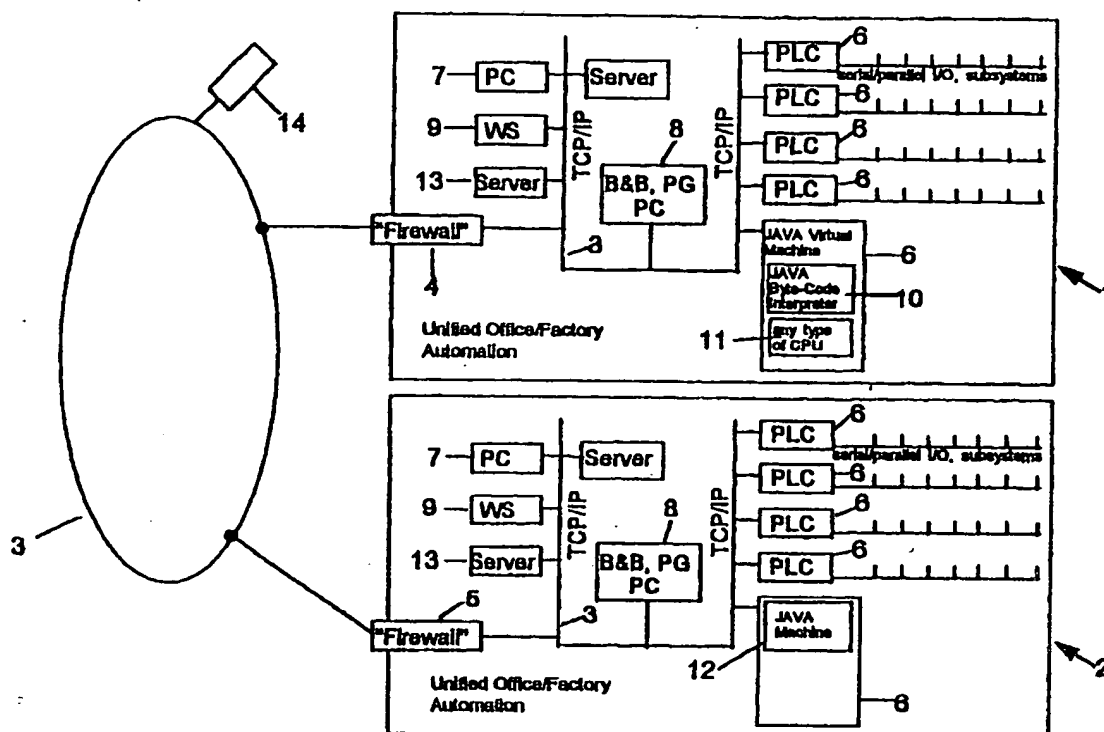

DE 29600609 U.

The device receives software functional components of a control program which operates the automation device cyclically and/or in interrupt mode and/or using priority control during a control mode. The software functional components can be loaded and bound into the control program while it is running.

The software functional components are designed in object oriented manner and can be loaded into the device via the internet and an internet communications interface. The automation device has a PLC object engine system for processing the software functional components. The communications interface enables TCP/IP protocol communications.

ADVANTAGE - Enables worldwide operation.

Dwg. 1/2.
